How to read this

Section A groups clients by the letters in their code (e.g. -PV, -TCE) — same letters means the same company. **Section B** groups by shared address — two client records at one building, the Wynd 28 / Casa Neos pattern. **Section C** lists records that look like the same client entered twice. Please tell us, per group, which are truly one business so we can model them as one client with multiple locations.

A. Brand families (same code suffix = one company)

Each shares the letters in its client code. Confirm each is one company, and whether you want it managed as one client with multiple locations. Wynd 28 and Casa Neos are already handled.

-CN	Casa Neos	2	Same building — ALREADY done

B. Same address — multiple client records

The Wynd 28 / Casa Neos pattern. For each: one operator with multiple units (we merge into one client + locations) or separate businesses sharing a building?

Same brand at one address — looks like multi-unit

What we need back

1. Section A: confirm the brand families + whether each chain should be one client with N locations.
2. Section B: for each address, “one operator, multiple units” vs “separate businesses.”
